NOTE: Availability of water <u>does not</u> guarantee the granting of a building or sewage permit. We recommend applying for a sewage permit or at least a site evaluation BEFORE a well is drilled. Unsuitable soils or site may result in denial of sewage and/or building permits.

NOTE: High levels of **perchloroethylene** have been measured in the shallow aquifer in the vicinity of the intersection of **Hamilton and Labree Roads**. The area of investigation extends **west to Rice Road and east approximately 1/3 mile along the Hamilton Road North**. Drilling into the impacted aquifer could expose drilling personnel to contaminated soils and water. Moreover, during construction of wells in close proximity to the zone of contamination, proper sealing and isolation of separate aquifers is required and extremely critical to prevent possible contamination of deeper aquifers and minimize potential liability. Therefore, *PRIOR TO ANY DRILLING IN THESE AREAS* please contact EPA Region 10 @ 206-553-2709 for more specific information about this area of concern.

NOTE: High levels of **Volatile Organic Compounds** have been measured in the shallow aquifer in the vicinity of the intersection of **Jackson Hwy and the Forest Napavine Road East**. The area of investigation extends within a 1 mile radius of the intersection. Drilling into the impacted aquifer could expose drilling personnel to contaminated soils and water. Moreover, during construction of wells in close proximity to the zone of contamination, proper sealing and isolation of separate aquifers is required and extremely critical to prevent possible contamination of deeper aquifers and minimize potential liability. Therefore, *PRIOR TO ANY DRILLING IN THESE AREAS* please contact Washington State Department of Ecology, at (360) 407-7115 for more specific information about this area of concern.
